

At last, thousands of detailed diagnostic photos for people who know some New England plants, but want to know more with complete certainty. You already know the trees? What about during winter? How about the twig shown above?

Do you prefer to use binary keys or illustrations to identify vascular plants? How about your students, scouts or yourself? Do you use written keys? If only somebody would take the keys, photograph the characters on living plants, then put them all in one e-book . . .

To obtain a copy:
CD lower resolution: \$ 49, or
Data DVD high resolution: \$ 69
(for either, please add \$ 3 shipping)

“Marty Michener has produced a marvelous treasure trove of botanical exposition for over 1,200 plant species, exquisitely detailed, and superbly illustrated with 5600 wonderful diagnostic photographs. It is a tremendous accomplishment that provokes imagination of how floras, field guides and other works in natural history might be presented in the future. In making effective use of tools of technology, Michener has skillfully produced a masterpiece, which is likely to set a new standard in digital publication of elements in our natural environment. The quality of illustration, accuracy of scientific fact, ease of search and sort capabilities, make this work a must for anyone interested in natural history.” — **Dr. John T. Kartesz**, Director, Biota of North America Program

“It is truly magnificent, Marty. I can’t wait to really work with it when we get back. It is just the sort of thing I have long ago decided I needed if I was ever to learn how to identify plants, and now it is, unsurprisingly, you who has created the ultimate draft of that dream. Thank you for doing such a superb job.” — **Dr. Roger S. Payne**, founder and president of Ocean Alliance, author of “Among Whales”

Botany Everywhere
woods, field, home and garden plants of NE USA
by **Martin C. Michener, PhD**

5600 Diagnostic Photos of 1250 plants
A PDF file plant book, easily read on any Windows PC, Mac, or Linux. No internet necessary for using the main e-book.

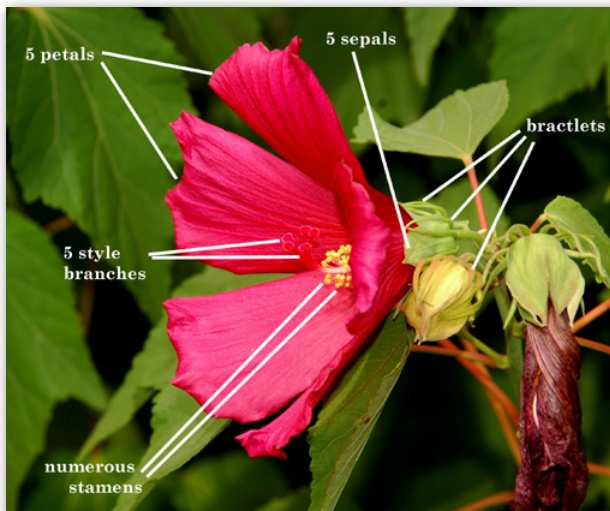

“Dr. Michener’s Botany Everywhere is the best and most user-friendly plant identification publication I have ever seen. As a zoological ecologist, plant identification has been at once the most necessary adjunct to my work and my most difficult task. But only difficult until now! Never before have such illustrations and indepth coverage been available. If you want to know what kind of plant is before you, here is the way. And there is so much more, too. There is a wealth of natural history information, from toxicity to delicious recipes: Amazing!” — **Dr. James D. Lazell**, President, The Conservation Agency, Jamestown, RI

subject line: Botany Everywhere

Landscape Planners, Gardeners:

- ⇒ Easily find garden or wild species, weeds or flowers.
- ⇒ Use as office reference or hand-held in the field (shown on a 20 oz. Sony Vaio Windows Vista PC).
- ⇒ High Resolution DVD version allows copy-paste of photos into your own documents for personal uses.
- ⇒ Very little technical vocabulary necessary, even with grass and sedge identifications.
- ⇒ Almost all common plants, native or cultivated, from NJ northward.
- ⇒ Especially designed to help with urban woody plants.
- ⇒ [Click-links](#) in book between index, keys and photos.
- ⇒ [Click-links](#) from book to web pages for additional info when connected to your Internet browser.

Teachers:

Easily print out selected species pages for plants you wish your students to study on any 8.5 x 11 inch color printer.

“I spent time looking at your wonderful CD. Its SO MUCH MORE than I expected it to be! I couldn’t get over its overall appearance and had to get a neighboring teacher to come look at it. She thought it was outstanding, too. We thought the photos and text informative without being over-whelming. The diagrams and arrows pointing out certain details described were so helpful to someone wanting to understand a plant. What a fantastic job! I do so want to spend more time with the CD. So many of the plants you mention grow in this area and I’ve never found a source to tell me what they all are. I hope to share it with our high school biology instructor soon and see what he thinks of the CD. This CD would be a great asset to a middle school, high school, or college instructor and student when teaching/studying botany. Its a portable resource easily taken into the field or elsewhere. The photos are so clear in different stages of growth and angles that it enables one to readily identify a plant.” — **Jan Johnson**, Elementary School Teacher, Wakefield, NB.

Example page from Summer White Ash

House Plants, Herbs, Spices:

Find out where each plant grows and how to nurture it; look up a few recipes using exotic spices. If it is used commonly in New England, the fruit, seed or plant is shown and referenced in this book and on the web.
